

White Oak Creek Watershed Partners

Working hard to protect water quality.

ATRAZINE INFORMATION FOR CROP PRODUCERS

In the past there has been a major concern in the White Oak Creek - Sterling Run Watershed and areas surrounding Mt. Orab about the levels of atrazine. Nearly 40 agricultural herbicide products contain atrazine. If atrazine is not used to label specifications the chemical has been known to get into local streams and the Mt. Orab Water Treatment Plant. Mt. Orab fills their reservoirs with surface water from White Oak Creek. We ask crop producers to keep in mind that application in the fall is not permitted! It is also important when atrazine is applied in the spring to follow all mandatory set back standards.

It is very important to remember that the atrazine herbicide can not only have an effect on our water resources but also on our health and the health of our children.

Atrazine is NOT labeled for fall application!

Contacts:

- White Oak Creek Watershed Group: 378-4424 ext. 123
- Mt. Orab Water Treatment Plant: 444-2657
- Questions call your local herbicide supplier.
